Optical article having reflection reducing performance - composed of  
inorganic silicon oxide film formed on synthetic resin substrate

Patent Assignee: SEIKO EPSON CORP (SHIH )

Number of Countries: 001 Number of Patents: 001

Abstract (Basic): JP 6082603 A

A surface on a synthetic resin substrate is provided with a single  
or multiple layer antireflection film composed of inorganic substance  
of SiO<sub>2</sub>, obtd. by reacting terminal silanol organic silane cpd. having  
gas hydrophobic radical in vacuum or air on the surface.

An optical article with a reflection reducing performance is a  
synthetic resin lens or hard coated synthetic resin lens for glasses.

USE/ADVANTAGE - The reaction of silane cpd. changes optical article  
surface properties, and also optical article characteristics  
substantially. A hydrophobic property on the surface weakens the  
integrity on the optical article surface with water and impurities in  
water, preventing yellowing phenomena.
